Budget brings Smartphone

PARVEZ IFTIKHAR
ISLAMABAD

Pakistan's national budget for the fiscal year 2017-18 is being discussed and debated at all levels. The government appears to have given some attention to the information technology sector with facilitation steps, but at the same time some other measures run contrary to the interest of IT industry.

The promotion of the sector needs particular attention as the world pushes ahead with technological advancements to spur economic development and tackle emerging challenges like climate change.

Such rainfall is going to be far more frequent in the upcoming years, says the study. Express

deficits and for the last three consecutive years, some parts of Karnataka and Maharashtra have remained dry. On the other hand, northwest is getting flooded far too often and this trend is seen extending to the northeast. All this simply indicates that the pre-monsoon heat and humidity have increased and it has the most severe impact on farmers, preparing the land for the monsoon season. Raghu Murtugudde, senior research scientist at the Indian Institute of Space and Astronautical Sciences, said that the trend is seen extending to the northeast.

The finance minister announced that smartphones with Rs1,000 and below will now attract 15% customs duty. However, later it was announced that at the same time the duty on the lowest-end ("un-anticipated") phone has been increased from Rs300 to Rs650. Customs duty of Rs650 on the lowest-end phone will be a bonanza for the smugglers! Smartphone is now the most used gateway to internet. Therefore, smartphones should be duty-free.

Customs duties on telecom equipment, which varied from 11% to 16%, have been replaced with regulatory duty.

finds new

heavy rains during June to September over India - this study has painted an altogether different picture. Researchers at IIT found that the Arabian Sea holds as high as 36 per cent moisture, followed by land evaporation contributing up to 29 per cent and, lastly, moisture pumped-in by the Bay of Bengal contributes the lowest at 26 per cent. "Our findings indicate that land transpiration is also a major contributor to the Southwest monsoon and there is a need to consider it during the operational forecasts," said Subimal Ghosh, researcher at IIT-Bombay.

Unlike the Pacific or Atlantic Oceans, which vent out their excess heat over to either of the poles, researchers categorically highlight that the Arabian Sea has no such option available. "Since the warmer areas over the Arabian Sea have also been noted to be landlocked region, the sea here has little or no avenues to releasing its latent heat into the atmosphere," said Koll.

However, also suggest extreme event short span of time may have a bigger term forecast and will often

the last few years, some of the Maharashtra. One of the most interesting is that the frequency of heavy rainfall has increased significantly in the Arabian Sea, 13 ex-

not apply anymore, in which case it would mean an increase of 9%. Incidentally, till 2014 the same duties ranged from 0% to 5%, but were more than doubled soon after the spectrum auction of 2014. If indeed it is a reduction, it would be a positive move because the operators like Zong, Telenor and Jazz are investing in deployment of 4G networks.

Increase in duty on mobile phones
Customs duty of Rs250 on the import of mobile phones has been replaced with regulatory duty of Rs250.

It appears to be a similar story as of telecom equipment as some of the handsets were also being imported under FTA with China. The same regulatory duty has been de-

the jurisdiction of provincial governments, an equivalent GST is being levied between 19% and 19.5%, is not viable. One hopes the province will match this reduction to have a uniform rate across the country.

location for IT park
An amount of Rs6 billion has been allocated to set up an IT park in Islamabad, which will receive funding from South Korea.

South Laptop Scheme
An amount of Rs20 billion has been allocated for PM's skill development laptop and youth programme.

The fund is aimed at helping the youth go digital. Perhaps in some such populist initiatives, the prices of IT-PCs, routers, and other peripherals are erratic.

study
warming, there is significant amount of moisture available in the atmosphere. This moisture then gets transported by strong surges of westerly winds over the Indian mainland during monsoon, resulting in heavy rainfall.

old rise in
it to warming of the

As part of this joint study, researchers, led by Roxy Mathew Koll from city-based Indian Institute of Tropical Meteorology (IITM), along with experts from IIT-Bombay and University of Maryland, have tracked this rising trend during 1950-2015 period, where widespread extreme heavy rainfall (150 mm or more) was observed over a span of over 5 lakh square kilometre area along central India.

Statistics from the national Disaster Database show that close to 70,000 people lost their lives and another crore people were rendered homeless in the 268 days of heavy rains, flash floods, torrential rains or landslides recorded over central India in the last six decades. The warming has been noted in the north of the Arabian Sea - the Indo-Pak region and other regions in the northwest of the Indian subcontinent. "Due to excess warming, the monsoon should be duty-free."

it in duty on telecom equipment
Customs duties on telecom equipment, which varied from 11% to 16%, have been replaced with regulatory duty.

first glance, it appears to be a positive move, but it is not very clear if it is being said in a serious manner.
