ISLAMABAD

Pakistan's national budget for the fiscal year 2017-18 is being discussed and debated at all levels. The government appears to have given some attention to the information technology sector with facilitation steps, but at the same time some other measures run contrary to the interest of IT industry.

The promotion of the sector needs particular attention as the world pushes ahead with technological advancements to spur economic development and tackle emerging challenges like cyber security.

He said Such rainfall is going to be far more frequent in the upcoming years, says the study. Express

deficits and for the last three consecutive years, some parts of Karnataka and Maharashtra have remained dry. On the other hand, northwest is getting flooded far too often and this trend is seen extending to the Northeast. All this simply indicates that the pre-monsoon heat and humidity have increased and it has the most severe impact on farmers, preparing the land for the monsoon season. Raghu Murtugudde, senior meteorologist, said heavy rains during June to September over India - this study has painted an altogether different picture. Researchers at IIT found that the Arabian Sea holds as high as 36 per cent moisture, followed by land evaporation contributing up to 29 per cent and, lastly, moisture pumped-in by the Bay of Bengal contributes the lowest at 26 per cent. "Our findings indicate that land transpiration is also a major contributor to the Southwest monsoon and there is a need to consider it during the operational forecasts," said Subimal Ghosh, researcher at IIT-Bombay.

heavy rains during June to September over India - this study has painted an altogether different picture. Researchers at IIT found that the Arabian Sea holds as high as 36 per cent moisture, followed by land evaporation contributing up to 29 per cent and, lastly, moisture pumped-in by the Bay of Bengal contributes the lowest at 26 per cent. "Our findings indicate that land transpiration is also a major contributor to the Southwest monsoon and there is a need to consider it during the operational forecasts," said Subimal Ghosh, researcher at IIT-Bombay.

Unlike the Pacific or Atlantic Oceans, which vent out their excess heat over to either of the poles, researchers categorically highlight that the Arabian Sea has no such option available. "Since the warmer areas over the Arabian Sea have also been noted to be landlocked region, the sea here has little or no avenues to release its latent heat into the atmosphere," said Koll. However, weather experts also suggest that since such extreme events do not occur in a short span of time, forecasters have a bigger role to play. "Short-term forecasts are getting better and will continue to do so in the coming years. So, we can have better planning and management for protecting crops, for which solutions like agro-forestry, where trees would shelter crops and reduce the water runoff and prevent soil erosion," Murtugudde said.

In addition, experts feel that the local administration in urban areas like Mumbai, Chennai and Bengaluru, which have, in recent years, experienced severe flooding caused due to extremely heavy rainfall over a short span of time, can make better use of these forecasts and improve management of transportation, schools, hospitals and storm drainage in such situations.

As part of this joint study, researchers, led by Roxy Mathew Koll from city-based Indian Institute of Tropical Meteorology (IITM), along with experts from IIT-Bombay and University of Maryland, have tracked this rising trend during 1950-2015 period, where widespread extreme heavy rainfall (150 mm or more) was observed over a span of over 5 lakh square kilometre area along central India.

Statistics from the national Disaster Database show that close to 70,000 people lost their lives and another crore people were rendered homeless in the 268 days of heavy rains, flash floods, torrential rains or landslides recorded over central India in the last six decades. The warming has been noted in the north of the Arabian Sea - the Indo-Pak region and parts of the northwestern Indian subcontinent. "Due to excess heat, the monsoon should be du...

Statistics from the national Disaster Database show that close to 70,000 people lost their lives and another crore people were rendered homeless in the 268 days of heavy rains, flash floods, torrential rains or landslides recorded over central India in the last six decades. The warming has been noted in the north of the Arabian Sea - the Indo-Pak region and gulf regions in the northwest to the gulf. "Due to excess warming, there is a significant increase in the number of smartphones should be duty-free."

it in duty on telecom equipment
Customs duties on telecom equipment, which varied from 11% to 16%, have been replaced with a 9% regulatory duty. In a first glance, it appears to be a reduction, but it is not very clear if it is being said that

now the
be exempted from first three years.

This appears to be a measure of the increase in (thank) birth rates, some of the top priorities will be strategies or rates of tax

with
measures to reduce the water runoff and prevent soil erosion," Murtugudde said.

In addition, experts feel that the local administration in urban areas like Mumbai, Chennai and Bengaluru, which have, in recent years, experienced severe flooding caused due to extremely heavy rainfall over a short span of time, can make better use of these forecasts and improve management of transportation, schools, hospitals and storm drainage in such situations.

He provided deposits come from earnings remitted from abroad. IT exporters will also make business-related payments to Pakistan through these accounts. It is expected that

Cut in customs duty on smartphones
The finance minister announced that smartphones with Rs1,000 or less in customs duty will now attract Rs650 as duty. However, later it was announced that at the same time the duty on the lowest-end ("un-anticipated") phone has been increased from Rs300 to Rs650.

Customs duty of Rs650 on the lowest-end phone will be a bonanza for the smugglers!

Smartphone is now the most used gateway to internet. Therefore, smartphones should be duty-free.

Cut in duty on telecom equipment
Customs duties on telecom equipment, which varied from 11% to 16%, have been replaced with a 9% regulatory duty.
